Q1. Which is not an example of a quantitative variable?

Ⓐ Age

Ⓑ Marital status

Ⓒ Salary

Ⓓ Weight

Q2. The ordinal scale is used when:

Ⓐ Differences between values are meaningful

Ⓑ There is a true zero

Ⓒ Categories can be ranked

Ⓓ Data can only be labeled

Q3. Which of the following is a discrete variable?

Ⓐ Temperature

Ⓑ Height

Ⓒ Number of siblings

Ⓓ Distance

Q4. The sample is:

Ⓐ Always larger than the population

Ⓑ The entire group being studied

● A subset of the population

Ⓓ Chosen only randomly

Q5. Which graph is best suited for quantitative, continuous data?

Ⓐ Bar graph

● Histogram

Ⓒ Pie chart

Ⓓ Pareto chart

Q6. Query times (ms): 5, 6, 7, 7, 8, 9, 50. Which measure changes MOST if 50 becomes 500?

Ⓐ Median

Ⓑ Mode

Ⓒ Mean

Ⓓ First Quartile

Q7. If 95th percentile response time is 220 ms, it means:

Ⓐ 95% of responses are exactly 220 ms

Ⓑ 5% of responses exceed 220 ms

Ⓒ 95% of responses exceed 220 ms

Ⓓ Median is 220 ms

Q8. If CPU utilization data shows: Mean = 75%, Median = 82% and Mode = 90%. The system usage distribution is:

Mean >

Ⓐ Positively skewed

● Negatively skewed

Ⓒ Symmetric

Ⓓ Uniform

Q9. Two sorting algorithms are tested (in ms):

Algorithm A: 19, 20, 21, 22, 23, 30

Algorithm B: 15, 16, 21, 21, 24, 30

Which statement is correct?

Ⓐ Both algorithms have equal performance

Ⓑ Algorithm B is more stable

Ⓒ Mean of B is heavily influenced by an outlier

Ⓓ Median of A is larger than B

Q10. The deciles divide the data into:

Ⓐ 4 equal parts

Ⓑ 5 equal parts

● 10 equal parts

Ⓓ 100 equal parts
