

EAST WEST UNIVERSITY
Department of Computer Science and Engineering
B.Sc. in Computer Science and Engineering Program
Quiz 1, Spring 2025 Semester

Course: CSE 103, Structured Programming, Section-10
Instructor: Md. Asif Khan Rifat, Lecturer, CSE Department
Full Marks: 10 marks
Time: 30 minutes

Name: _____ ID: _____

Note: There are **THREE** questions, answer ALL of them. Course Outcome (CO), Cognitive Level, and mark of each question are mentioned at the right margin.

Identify and correct the mistakes in the following C code. The code is intended to calculate the area and perimeter of a circle based on the radius. It contains errors related to operators, data types, variables, and basic input/output. Highlight the modifications you made in your corrected version.

```
#include <stdio.h>

main() {
    float radius, area, perimeter;
    print("Enter radius of the circle: ");
    scanf("%lf", radius);
    area = 3.1416 * radius^2;
    perimeter = 2 * 3.1416 * radius
    printf("Area of the circle is: %d\n", area);
    printf("Perimeter of the circle is: %.2\n", &perimeter);
    return 0;
}
```

12-01-2015

[CO1, C2,
C3
Marks: 4]

2. Develop a C program to calculate the electricity bill based on the following conditions using if-else:
- For the first 100 units, the rate is BDT 5 per unit.
 - For the next 100 units, the rate is BDT 7 per unit.
 - Beyond 200 units, the rate is BDT 10 per unit.
- Input the number of units consumed, calculate the total bill and print it.

Sample Input	Sample Output
90	Total bill: 450
105	Total bill: 535
250	Total bill: 1700
