

1. Write a C program to add two numbers using pointers.
2. Write a C program to swap two numbers using pointers.
3. Write a C program to input and print array elements using pointer.
4. Write a C program to search an element in array using pointers.
5. C program to reverse an array using pointers.
6. Write a C program to find length of string using pointers.
7. Write a C program to return Multiple values from a function. [Suppose a function void calculate(int a, int b, int *sum, int *product) that takes two integer values and returns both the sum and product of two numbers.]
