

String Practice Problems

1. Write a program to input a string and print it in reverse order without using any built-in functions.
 - Sample Input:
"Hello"
 - Sample Output:
"olleH"
2. Write a program to count the number of vowels and consonants in a string. Ignore any non-alphabet characters (e.g., spaces, punctuation).
 - Sample Input:
"Hello World!"
 - Sample Output:
Vowels: 3, Consonants: 7
3. Write a program to find the frequency of a specific character in a given string.
 - Sample Input:
String: "Hello, how are you?", Character: "o"
 - Sample Output:
Character 'o' appears 3 times
4. Write a program to find the first occurrence of a character in a string and print its position.
 - Sample Input:
String: "Hello World", Character: "o"
 - Sample Output:
First occurrence of 'o' is at position 4
5. Write a program that takes a string and a character as input, and removes all occurrences of that character from the string.
 - Sample Input:
String: "Hello, World!", Character: "l"
 - Sample Output:
"Heo, Word!"
6. Write a program to check if a string contains only digits (numeric string).
 - Sample Input:
"123456"
 - Sample Output:
The string contains only digits
7. Write a program to find the longest word in a sentence.

- **Sample Input:**
`"I am learning C programming"`
 - **Sample Output:**
`"programming"`
8. Write a program to reverse each word in a sentence while maintaining the word order.
- **Sample Input:**
`"Hello World"`
 - **Sample Output:**
`"olleH dlroW"`
9. Write a program to find the frequency of each word in a string and print the result. Ignore case and punctuation marks.
- **Sample Input:**
`"Hello world! hello everyone."`
 - **Sample Output:**
`hello: 2, world: 1, everyone: 1`
10. Write a program to check if a given string contains any spaces, and if so, replace all spaces with underscores (_).
- **Sample Input:**
`"Hello World"`
 - **Sample Output:**
`"Hello_World"`
