

Student ID: 2025-1-60-055

Student Name: Sadman Showmik Anik

EAST WEST UNIVERSITY
Department of Computer Science and Engineering
B.Sc. in Computer Science and Engineering Program
Class Test 1, Fall 2025 Semester

Course: CSE 110 Object Oriented Programming, Section 4
Instructor: Dr. Md. Hasanul Ferdaus, Assistant Professor, CSE Department
Full Marks: 25 (will be normalized out of 5)
Time: 20 Minutes

Note: There are FIVE (5) questions; answer ALL of them.

1. Write the output of the following Java program:

[CO1,
Mark: 5]

```
class Box {  
    double width;  
}  
  
public class TestBox {  
    public static void main(String[] args) {  
        Box b1 = new Box();  
        b1.width = 50;  
        Box b2 = b1;  
        b2.width = 20;  
        System.out.println(b1.width);  
    }  
}
```

ANSWER:

20

2. Write a small Java class **Circle** with one instance variable **radius** and a parameterized constructor that initializes it.

[CO1,
Mark: 5]

ANSWER:

```
class Circle {  
    double radius;  
  
    Circle(double r) {  
        radius = r;  
    }  
}
```

3. What will be the output?

[CO1,
Mark: 5

```
public class Q5 {  
    public static void main(String[] args) {  
        int[] nums = {2, 4, 6, 8};  
        int sum = 0;  
        for (int n : nums) {  
            if (n % 4 == 0)  
                continue;  
            sum += n;  
        }  
        System.out.println(sum);  
    }  
}
```

ANSWER:

8

4. The following code doesn't work as intended. Fix it so that **width** and **height** are properly initialized.

[CO1,
Mark: 5

```
class Rectangle {  
    int width, height;  
    Rectangle(int width, int height) {  
        width = width;  
        height = height;  
    }  
}
```

ANSWER:

```
class Rectangle {  
    int width, height;  
    Rectangle(int width, int height) {  
        this.width = width;  
        this.height = height;  
    }  
}
```

5. Find and correct the syntax errors:

```
public class Q2 {  
    public static void main(String[] args) {  
        double value1 = 10.5;  
        int value2 = 4;  
        int result = value1 / value2;  
        System.out.println(result);  
    }  
}
```

ANSWER:

5

```
Public class Q2 {  
    Public static void main(String[] args) {  
        double value1 = 10.5;  
        int double value2 = 4;  
        double result = value1 / value2;  
        System.out.println(result);  
    }  
}
```

Output:
2.625
