

Exercise on word formation

1. (accept, decorate, complex, add, believe, admire, approach, educate)

In a small town known for its rich history and artistic heritage, a young sculptor named Elias struggled to gain (a) _____ from the local art community. His work was intricate, filled with (b) _____ elements that reflected the (c) _____ of human emotions, yet critics often dismissed it as too unconventional.

One day, an art professor from a distant city visited the town, bringing an (d) _____ perspective that challenged the traditional (e) _____ that art should always be simple and realistic. She found Elias's sculptures not only aesthetically pleasing but also deeply (f) _____, conveying powerful stories through symbols and abstract forms.

Encouraged by this newfound (g) _____, Elias decided to refine his craft even further. He adopted a new (h) _____ to his designs, incorporating (i) _____ details that added depth and meaning to his work.

Months later, at a major exhibition, his art was finally recognized, proving that true creativity lies in embracing complexity rather than avoiding it. His journey became an (j) _____ lesson for aspiring artists in the town, teaching them that innovation often faces resistance before it is understood and appreciated.

2. (enthusiasm, evaporate, fascinating, expect, fly, grow, hope, imitate)

As a child, Lina had always watched birds with great (1) _____, marvelling at their effortless (2) _____ across the sky. Her (3) _____ with their movements led her to spend hours observing their wings, trying to understand the secret of their graceful motion.

Unlike other children, who would simply (4) _____ bird calls for fun, Lina's interest was far from (5) _____. She wanted to build something that could truly mimic nature. With every passing year, her curiosity turned into a serious pursuit of knowledge and her (6) _____ in aerodynamics grew rapidly.

Despite her passion, her journey was not without difficulties. The slow progress of her experiments and her repeated failures tested her patience, but she remained (7) _____, believing that she was on the right path. While others doubted her, she held on to the (8) _____ that one day she would succeed.

One summer, as she worked tirelessly in her small workshop, she noticed how the process of (9)_____ affected the weight of materials, an observation that helped her refine her designs. At last, after years of hard work, she built a lightweight model that could glide smoothly.

Her first successful test flight well appreciated by her friends and family. It was a symbol of how perseverance and learning can lead to remarkable (10)_____.

Exercise on identifying fragments and sentences

3. Identify the fragments and the sentences. If a clause is a fragment, turn that into a complete sentence.

- a) Although she worked on her project for weeks.
- b) The scientist who discovered the new species.
- c) She never expected to receive such an award, but she was grateful.
- d) After the storm, leaving destruction behind.
- e) He always wanted to travel to distant countries and explore ancient ruins.
