

Linked List Practice Questions

1. Singly Linked List — Delete Even Position Nodes

Question: Write a C++ function to delete all nodes that are in even positions of a singly linked list.

Example: $10 \rightarrow 20 \rightarrow 30 \rightarrow 40 \rightarrow 50$

After deletion: $10 \rightarrow 30 \rightarrow 50$

2. Doubly Linked List — Move First Node to Last

Question: Write a C++ function to move the first node of a doubly linked list to the last position.

Before: $10 \leftrightarrow 20 \leftrightarrow 30 \leftrightarrow 40$

After: $20 \leftrightarrow 30 \leftrightarrow 40 \leftrightarrow 10$
